

What is ekkomaxx™ ?

ekkomaxx™ is a high performance, environmentally profound alternative to Portland cement. It is derived from coal ash and is chemically manipulated to produce a wide range of performance characteristics.

A ready-mix producer can offer a broad spectrum of concretes by using only one type of cement powder, adjusting performance on a truck by truck basis by simply modifying the dosage rate, type of liquid admixture and cement ratio.

This versatility will enable ready-mix producers to more readily meet the varying product demands of their market region as well as *differentiating themselves from Portland based producers by offering the only truly GREEN sustainable construction cement in the world today.*

- Type I
- Type II
- Type III
- Type IV
- Type V
-

ekkomaxx™

is a single powder cement solution and will eliminate the need to inventory, manage & exchange multiple types of Portland cement.

The demand for GREEN construction materials will only continue to grow as more and more projects strive for LEED points and other environmental performance goals.

ekkomaxx™ reduces CO₂ at a rate of one ton for every ton of Portland cement it displaces.
